Offshore Minerals Management eGov Transformation Project

Gary L. Lore
Project Manager

Customer Appreciation Day Gulf of Mexico Region October 17, 2001

Primary Project Objectives

- Streamline and improve the performance of OMM business processes
- Enhance access to data supporting the Offshore Program
- Improve the manner in which OMM serves its constituencies
- Ensure that OMM processes are compatible with industry and other regulators
- Ensure adherence to legislative and Administration mandates

Why change is needed...

- Highly fragmented "stove-piped" architecture
- Inefficient business processes
- Need to respond to tightening energy supply and global competition for E&P funds
- Need flexibility to address increasing complexity of business operations and technologies
- OMM must equip its workforce with the processes, tools, and technologies they need to successfully perform

Why change is needed... a highly fragmented architecture

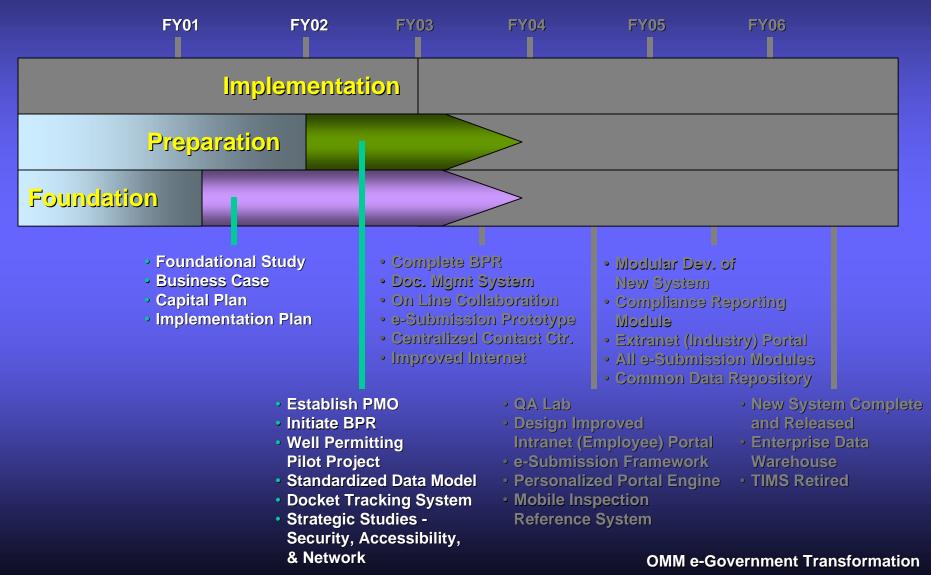

OMM EMPLOYEES **INDUSTRY** Web Content OMM Intranet **OMM Internet** OMM employees (for employee use) (for external use) have to check **PUBLIC** multiple data FO RE LE Sharing and Exchange sources to retrieve **Offices** (Tacit Knowledge) No Consistent Application of Business Rules information PD etc. External When data are stakeholders have difficult to find, it is limited access to **Employee Created** Access Databases recreated. OMM's internal decreasing its data stores Automated Information integrity Nearly all TIMS Database TIMS TIMS TIMS interaction is done **GOMR PACIFIC** ΑK through manual information exchange (phone, mail, personal) Seismic Data **Stores** Limited Seismic Data Web interfaces are not sufficiently leveraged Hardcopy Files

The OMM e-Government transformation is gaining momentum...

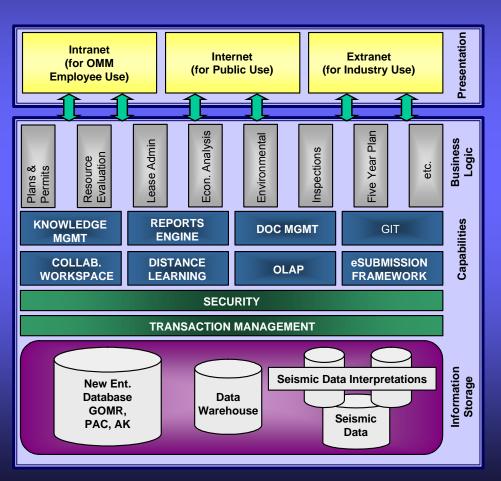

Program Management and Control...

A look at our future operating environment...the conceptual model

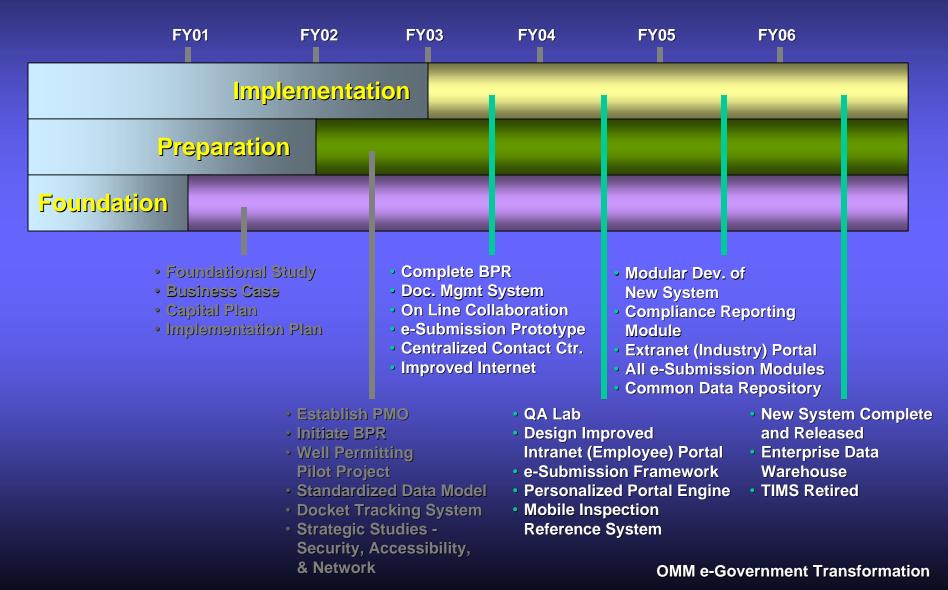

A look at our future operating environment...the applications and technology architecture

- No "bleeding edge"
 technologies; leverage
 COTS and industry best
 practices
- Layered reference models
- Significant emphasis on privacy, security, and accessibility

Looking forward to implementation... FY 2003 - FY 2006

OMM e-Government Transformation Goals

- Support MMS and DOI strategic goals
- Streamline core business processes
 - Restructure and realign workforce
- Strengthen OMM's regulatory program
- Reduce redundant industry reporting
- Increase public access to and participation in governmental processes
- Enhance competitive position of the OCS within the global marketplace
- Support e-Government goals of the Administration and Congress

FY 2002 Well Permitting and Reporting Pilot Project

- Enable operators to electronically submit applications to drill wells and submit activity reports
- Enable MMS to electronically receive, verify, and approve/accept all information related to drilling of wells
- Reduce cycle time for approvals
- Reduce reporting burden on industry
- Provide for immediate verification of data entry problems
- Provide industry and MMS ready and more timely access to complete inventory of required data submittals and status
